US ABDOMEN/PELVIS- UNEXPLAINED WEIGHT LOSS

Date of exam / Exam Date

September 28, 2021 12:54

RENSEIGNEMENT CLINIQUE / CLINICAL INFORMATION:

Child with since last night history of vomiting and abdominal swelling.

PROTOCOLE RADIOLOGIQUE / RADIOLOGIST'S REPORT:

ULTRASOUND OF ABDOMEN AND PELVIS WITH DOPPLER

No previous for comparison.

FINDINGS:

No evidence of hepatic steatosis. No gallstones, wall thickening, or pericholecystic fluid. Gallbladder demonstrates normal wall thickness. Kidneys show normal Doppler flow. Splenic contour is smooth. Splenic parenchyma is homogeneous. Bladder appears normal. No appendicolith detected. Free fluid with echoes, suggestive of inflammation. No mesenteric lymphadenopathy seen.

IMPRESSION:

Unremarkable abdominal ultrasound with normal appendix.

Consider repeating ultrasound if symptoms persist.

Case ID: CASE-1GAL9R-10882
