US ABDOMEN/PELVIS- ABDOMINAL SWELLING

Date of exam / Exam Date

July 19, 2022 02:52

RENSEIGNEMENT CLINIQUE / CLINICAL INFORMATION:

13-year-old Male presenting with intermittent abdominal pain and vomiting.

PROTOCOLE RADIOLOGIQUE / RADIOLOGIST'S REPORT:

ULTRASOUND OF ABDOMEN AND PELVIS WITH DOPPLER

No previous for comparison.

FINDINGS:

No abnormal Doppler flow. The gallbladder is unremarkable. Kidneys show normal Doppler flow. Spleen appears normal for age. Bladder is well-distended and normal. No abnormal peri-appendiceal findings. Free fluid with echoes, suggestive of inflammation. Reactive mesenteric adenopathy with largest node 20mm.

IMPRESSION:

Mesenteric lymphadenopathy as likely cause of symptoms.

Recommend clinical correlation.

Case ID: CASE-O709A7-13343
