US ABDOMEN/PELVIS- SUSPECTED ABSCESS

Date of exam / Exam Date

March 27, 2023 23:16

RENSEIGNEMENT CLINIQUE / CLINICAL INFORMATION:

Child presenting with unexplained fever and RLQ discomfort.

PROTOCOLE RADIOLOGIQUE / RADIOLOGIST'S REPORT:

ULTRASOUND OF ABDOMEN AND PELVIS WITH DOPPLER

No previous for comparison.

FINDINGS:

The liver shows mild increased echogenicity, likely due to technical factors. The gallbladder is unremarkable. No renal calculi, masses, or hydronephrosis detected. No abnormal Doppler flow in spleen. No vesicoureteral reflux seen. Appendix not definitively visualized due to bowel gas. Moderate free fluid in pelvis. Prominent mesenteric lymph nodes in RLQ, largest 8mm.

IMPRESSION:

Mesenteric adenitis identified; appendix normal.

If suspicion remains high, consider surgical evaluation.
