US ABDOMEN/PELVIS- SUSPECTED TUMOR

Date of exam / Exam Date

September 15, 2021 09:32

RENSEIGNEMENT CLINIQUE / CLINICAL INFORMATION:

Child with recent onset fever and persistent abdominal pain.

PROTOCOLE RADIOLOGIQUE / RADIOLOGIST'S REPORT:

ULTRASOUND OF ABDOMEN AND PELVIS WITH DOPPLER

No previous for comparison.

FINDINGS:

The liver appears homogeneous. No abnormal Doppler signals in gallbladder. Kidneys show normal Doppler flow. No focal splenic lesions noted. No evidence of cystitis. Technical factors limit visualization of appendix. Minimal pelvic fluid, likely physiologic. Complex fluid collection 4.3cm in RLQ, consistent with abscess.

IMPRESSION:

Appendix non-visualized. Study equivocal for appendicitis.

Clinical correlation recommended. If high suspicion persists, consider surgical evaluation.

Case ID: CASE-QE0FVN-12359
