

## # Exam / Exam

US ABDOMEN/PELVIS- RLQ PAIN

Date of exam / Exam Date

January 07, 2018 13:16

### RENSEIGNEMENT CLINIQUE / CLINICAL INFORMATION:

2-year-old Female with post-surgical abdominal pain.

### PROTOCOLE RADIOLOGIQUE / RADIOLOGIST'S REPORT:

ULTRASOUND OF ABDOMEN AND PELVIS WITH DOPPLER

No previous for comparison.

### FINDINGS:

The liver shows mild increased echogenicity, likely due to technical factors. Mild hepatomegaly noted; otherwise unremarkable. No gallstones, wall thickening, or pericholecystic fluid. No evidence of cholecystitis. Both kidneys are symmetric in size and show normal corticomedullary differentiation. No evidence of splenomegaly. Bladder wall shows no abnormal thickening. Appendix is compressible, with no surrounding inflammation. No peritoneal fluid collections. No evidence of bowel obstruction. No peri-hepatic fluid seen.

### IMPRESSION:

Appendix is normal. No findings suggest appendicitis.

No immediate intervention required.

Case ID: CASE-OBF5KB-10274
