

Exam / Exam

US ABDOMEN/PELVIS- RENAL COLIC

Date of exam / Exam Date

January 19, 2019 13:02

RENSEIGNEMENT CLINIQUE / CLINICAL INFORMATION:

17-year-old Female with suspected Crohn's disease and abdominal tenderness.

PROTOCOLE RADIOLOGIQUE / RADIOLOGIST'S REPORT:

ULTRASOUND OF ABDOMEN AND PELVIS WITH DOPPLER

No previous for comparison.

FINDINGS:

Mild hepatomegaly noted; otherwise unremarkable. Gallbladder demonstrates normal wall thickness. Gallbladder is well-distended and normal. Kidneys are normal in size and echotexture for age. No focal splenic lesions noted. Bladder is well-distended and normal. Visualization limited by patient movement and bowel gas. Free fluid with echoes, suggestive of inflammation. No signs of Crohn's disease. Liver parenchyma is normal.

IMPRESSION:

Equivocal ultrasound, recommend follow-up.

Clinical correlation recommended. If high suspicion persists, consider surgical evaluation.

Case ID: CASE-M5LWW0-13417
