US ABDOMEN/PELVIS- UNEXPLAINED LEUKOCYTOSIS

Date of exam / Exam Date

June 30, 2022 21:25

RENSEIGNEMENT CLINIQUE / CLINICAL INFORMATION:

Child with suspected abscess and fever.

PROTOCOLE RADIOLOGIQUE / RADIOLOGIST'S REPORT:

ULTRASOUND OF ABDOMEN AND PELVIS WITH DOPPLER

No previous for comparison.

FINDINGS:

No peri-hepatic fluid seen. Liver contour is smooth; no masses seen. No gallstones, wall thickening, or pericholecystic fluid. No sludge or masses. Renal parenchyma appears homogeneous. Renal sinus anatomy is intact. Spleen is mildly enlarged, likely reactive. The bladder is fluid-filled and unremarkable. Visualization limited by patient movement and bowel gas. Free fluid with echoes, suggestive of inflammation. Multiple enlarged mesenteric lymph nodes seen, largest 7mm. The liver shows mild increased echogenicity, likely due to technical factors.

IMPRESSION:

Mesenteric adenitis confirmed by imaging.

Recommend urgent surgical consultation.

Case ID: CASE-K8OFWR-10622
