## PROTOCOLE OPERATOIRE / OPERATIVE REPORT

Site: Jewish General Hospital Date: 2023-11-27 10:13

Anesthésiste / Anesthetist: Dr. David Smith

Chirurgien / Surgeon: Dr. Victor Chen Assistant(s): Dr. resident Leo Morel

Diagnostic préopératoire / Pre-operative diagnosis:

## APPENDICITIS WITH BOWEL OBSTRUCTION.

Diagnostic postopératoire / Post-operative diagnosis:

PERFORATED APPENDICITIS.

Opération / Operation:

### LAPAROSCOPIC APPENDECTOMY WITH OMENTAL WRAPPING.

Tissu envoyé en pathologie / Tissue sent to pathology: Appendix and mesoappendix

Anesthésie / Anesthesia: General anesthesia with caudal block

### Historique et constatations opératoires / History and operative findings:

Patient (3 years, male) presented with abdominal pain with fever, normal WBC, elevated CRP. Imaging: CT scan revealing free fluid.

# Procédure(s) opératoire(s) / Operative procedure(s):

Patient in supine position. General anesthesia with mask induction administered. Time-out was performed and abdomen prepped in sterile fashion. Incision is made in left lower quadrant for open conversion. We place two additional trocars, one in the suprapubic region and one in the left lower quadrant, both under direct vision. No iatrogenic injuries occurred during trocar placement. Upon entering the abdominal cavity, moderate adhesions noted. The appendix was necrotic with intense inflammation. Abscess cavity found in RLQ and irrigated. Minimal adhesions were noted. No mesenteric ischemia. The appendix is mobilized using a combination of sharp and blunt dissection. The appendiceal artery is ligated and divided. Absorbable ligatures are applied prior to amputation. Specimen placed in EndoCatch bag for removal. Copious irrigation is undertaken to ensure removal of all inflammatory debris. Fascial closure is performed at the umbilical site using PDS 2-0. The skin is closed with interrupted nylon 4-0.

Discharge home when tolerating oral intake and afebrile. The patient tolerated the procedure well with minimal blood loss.
