## PROTOCOLE OPERATOIRE / OPERATIVE REPORT

Site: Hopital Maisonneuve-Rosemont Date: 2024-05-04 19:39

Anesthésiste / Anesthetist: Dr. Michael Brown Chirurgien / Surgeon: Dr. Elena Rodriguez Assistant(s): Dr. resident Sophia Lee

Diagnostic préopératoire / Pre-operative diagnosis:

## APPENDICITIS WITH BOWEL OBSTRUCTION.

Diagnostic postopératoire / Post-operative diagnosis:

SUPPURATIVE APPENDICITIS.

Opération / Operation:

### LAPAROSCOPIC CONVERTED TO OPEN APPENDECTOMY.

Tissu envoyé en pathologie / Tissue sent to pathology: Appendix and inflamed tissue

Anesthésie / Anesthesia: General anesthesia with local infiltration

### Historique et constatations opératoires / History and operative findings:

Patient (6 years, female) presented with right lower quadrant pain, markedly elevated WBC, elevated CRP. Imaging: CT scan revealing free fluid.

# Procédure(s) opératoire(s) / Operative procedure(s):

Patient in supine position. General anesthesia and epidural block administered. Time-out was performed and abdomen prepped in sterile fashion. Transverse infraumbilical incision is performed and access gained via blunt dissection. Single-incision laparoscopic port is used. No iatrogenic injuries occurred during trocar placement. Upon entering the abdominal cavity, extensive adhesions noted. Appendix was hyperemic and surrounded by A small localized abscess was found and drained. and The omentum was wrapped around the inflamed appendix. No unexpected findings. Blunt dissection is used to free the appendix from surrounding structures. The appendiceal mesentery is carefully taken down with harmonic scalpel. We apply an endoscopic stapler to the base of the appendix and divide it. Specimen placed in EndoCatch bag for removal. We lavage the abdomen extensively, paying particular attention to the pelvis and right gutter. Umbilical port site is closed with PDS 3-0 and skin with Steri-Strips.

Early ambulation and supportive care recommended. The patient tolerated the procedure well with minimal blood loss.
