Anesthésiste / Anesthetist: Dr. Aisha Patel

Chirurgien / Surgeon: Dr. Marie-Claire Dubois

Assistant(s): Dr. resident Anna Kim

Diagnostic préopératoire / Pre-operative diagnosis:
APPENDICITIS WITH INTUSSUSCEPTION.

Diagnostic postopératoire / Post-operative diagnosis:
APPENDICITIS WITH LOCALIZED PERITONITIS.

Opération / Operation:
LAPAROSCOPIC APPENDECTOMY WITH OMENTAL WRAPPING.

Tissu envoyé en pathologie / Tissue sent to pathology: Appendix

Anesthésie / Anesthesia: General anesthesia with caudal block

Historique et constatations opératoires / History and operative findings:

16-year-old male with 2 days abdominal pain, elevated WBC, elevated CRP, no fever. Imaging: CT scan revealing free fluid. family history of appendicitis. Past medical history is otherwise unremarkable.

Procédure(s) opératoire(s) / Operative procedure(s):

Patient in supine position. General anesthesia and epidural block administered. Time-out was performed and abdomen prepped in sterile fashion. Incision is made in left lower quadrant for open conversion. Single-incision laparoscopic port is used. No iatrogenic injuries occurred during trocar placement. Upon entering the abdominal cavity, minimal adhesions noted. Appendix appeared necrotic, surrounded by minimal inflammatory reaction. No abscess, but turbid fluid present. Multiple bowel loops adherent to the mass. No technical difficulties encountered during surgery. Appendix is isolated after adhesiolysis. The appendiceal mesentery is carefully taken down with harmonic scalpel. We apply an endoscopic stapler to the base of the appendix and divide it. Specimen placed in EndoCatch bag for removal. Abdominal lavage performed until clear. All port sites closed with non-absorbable Prolene 4-0. No need for drains postoperatively.

Early ambulation and supportive care recommended. Incidental Meckel's diverticulum found and left in situ. The patient tolerated the procedure well with minimal blood loss.
